

mPlatform™ provides the core functionalities for mobile data integration, management, manipulation and presentation.

It offers multiple adaptors to enterprise applications like ERP, CRM, SCM, Helpdesk; property management, logistics & network management systems; vehicles and assets location track and trace system.

It is a multi-channel xml messaging platform which incorporates existing innovative mobile Personal Information Management System (mPIMS™) and Enterprise Event Management. The contact, event and task management are "live synced" to Outlook® and integrated to the ERP and other back-end systems.

A further workflow and document security solution allows secured mobile document retrieval and mobile data submission using SMS, FVR and encryption solutions.
