## Mobile Sales Force Automation Solution

### About SalesEvo

SalesEvo is a revolutionary enterprise cum mobile sales process management system that enables both real-time and disconnected transactions between the mobile sales force and the backend enterprise office. With SalesEvo, sales force operating in the field can perform tasks such as sales order processing, real-time inventory checking, invoice creation, payment registration, account management, sales activities tracking and many more. Companies using SalesEvo can experience significant savings in operational costs and shortened sales cycle. Let SalesEvo create the unfair advantage for you against your competitor's in today's fast-paced economy.

#### Sales Order Processing

Sales team can create sales order for customer, issue invoice, track payments and issue receipts, all done through mobile devices.

#### Sales Promotion Management

Sales team are able to track promotional items and pricing, impose complex and customized pricing and discount schemes.

#### Mobile Inventory Management

Sales teams that carry goods for direct van sales can track the inventory they are carrying, check for remote stock availability, manages returned or exchanged goods effectively as well as handling of product transfer advice automatically.

#### Sales Route Planning and Activities Tracking

Sales team can plan in advance scheduled routes for visiting customers and schedule their sales activities to optimise sales resources and narrowing down of sales objectives.

#### Back-end Business Systems Integration

SalesEvo is designed for both a standalone environment as well as integrate-ability in mind for organisations that have existing enterprise resource planning and customer relationship management systems.

#### Connected and Disconnected data synchronisation

Depending on the usage scenario, SalesEvo can perform real-time access to back-end server via GPRS/Internet or, in the lack of it, perform off-line synchronisation to the back-end server once user have access to the office network both wired and wirelessly.
